**FOR IMMEDIATE RELEASE / SEPTEMBER 1, 2026**

# **FutureFeed Achieves FedRAMP High Authorized (Class D) Status, the Federal Government's Highest Cloud Security Bar**

The authorization confirms that the platform holding sensitive cybersecurity program information for organizations across the Defense Industrial Base now meets the same standard the government sets for its most sensitive unclassified systems.

---

The data you keep for compliance is also a record of where you are exposed. Your SSP, your POA&M, your open findings, your evidence: together they describe your defenses and your gaps in one place. For a contractor in the Defense Industrial Base, that is precisely what an adversary wants. CUI is targeted because it maps to programs, capabilities, and schedules that matter, and a loss does not stop at your own operations. It reaches the prime you support and the mission behind it. This is why the government holds a higher standard for systems where a loss of confidentiality, integrity, or availability could have severe or catastrophic consequences.

FutureFeed is now FedRAMP High Authorized (Class D), which aligns with the historical FedRAMP High baseline. The authorization follows an independent, third-party assessment of the security controls protecting the platform.

For you, it means the work you do to prove compliance is housed in a system assessed against the same baseline the federal government applies to its most sensitive systems.

## **Few compliance platforms reach FedRAMP High.**

Among the commercial SaaS platforms that hold any FedRAMP status, the designation places FutureFeed at the more rigorous FedRAMP High Authorization (Class D) tier, the standard used for the government's most sensitive unclassified systems. For the government contractors, MSPs, MSSPs, and consultants who rely on FutureFeed to manage sensitive cybersecurity program information, including system security plans, risk assessments, and audit-ready evidence for NIST 800-171 and CMMC, the authorization provides independent validation that the platform holding that information is itself held to a standard worthy of it.

---

"FutureFeed supports the people responsible for protecting the defense supply chain. Achieving FedRAMP High Authorized (Class D) status reflects the responsibility we accept when customers place their cybersecurity program information in our care."

**Mark Berman**  
CEO of FutureFeed

"We're proud to have partnered with FutureFeed throughout this journey, helping them navigate the complexities of FedRAMP and reach the highest authorization level for sensitive unclassified federal workloads. FutureFeed has been completely committed to bringing its proven compliance platform to an even broader federal and Defense Industrial Base market."

**Raymond de Avila**
